

PC Defender is a powerful, user-friendly Anti-Virus program that provides the highest quality of data protection and security possible.

Features such as: auto virus checking, auto protection, real time internet protection, pre-scanning, quarantine management, free lifetime updates and full integration with Microsoft® Explorer - puts PC Defender in the top tier of Anti-Virus programs.

Features & Benefits

Automatic Protection - PC Defender uses a powerful auto-protection tool that runs continuous background scans on your computer, so that the files which you open and use will be scanned as you open and use them to ensure that they are not harmful. This feature ensures that viruses aren't allowed to spread on your computer, as PC Defender will stop you from being able to open any files that have viruses in them..

System Scans - Run full or partial system scans to check if any element or section of your computer has been infected.

Quarantines - PC Defender Includes a very powerful, user-friendly Quarantine Manager. When viruses are found, instead of deleting them they are quarantined; this ensures that system critical files (or even important documents that you don't want to lose) aren't deleted and your computer will still run properly while also protecting your computer by moving viruses to a secure location.

Real Time Internet Protection - Protects you from Internet threats in real-time. Scans e-mails and other files that are downloaded from the Internet to make certain that they are safe to use, read, open, and save.

Pre-Scan New Software - PC Defender Includes an auto-scan feature which can analyze any floppy disk, CD, or DVD that is inserted into your system so that you can be sure it is safe to access and use.

Scheduling - Scheduling features allow you to schedule automatic full or partial scans at hourly, daily, or weekly intervals. You can create one or several scans and then simply forget about them, as the program protects your computer for you.

Integration - PC Defender Integrates with Windows® Explorer so that you can scan any file simply by right-clicking on it and selecting "Scan for Viruses."

Features & Benefits

World Class Virus Protection - PC Defender uses the ClamAV database, one of the world's most powerful and up-to-date virus definition databases. This database is constantly updated to protect you from the newest viruses.

Free Updates For Life - Unlike most Anti Virus programs that require a yearly or even monthly subscription fee, downloading virus definition updates with PC Defender is free for life.

Ease of Use - PC Defender has a sleek, easy-to-use user interface so that even new computer users can give their computer the best possible antivirus protection.

Automatic Virus Checking- PC Defender starts automatically when Windows® starts and runs in the system tray.

The program also automatically updates itself so that you will always have the newest virus definitions.
